Most People Don't Even Understand the Problem — and That's Exactly Why Google Gets Away With Everything

generative-ai

Bitu79 1 June 29, 2026, 10:05am

Here are all my posts together — this is why I wrote this one.

https://discuss.ai.google.dev/u/bitu79/activity/topics

I'm not here to complain. I'm here to show what actually happens when Google ignores the law.

I've documented everything — deleted data still being processed, DSAR requests ignored, and official replies that say nothing.
I've posted publicly on Google's own AI forum.
I've shared full email chains with Google's Data Protection Office.
I've contacted the Data Protection Commission (DPC).
And still, nothing changes.

The problem isn't just Google.
It's the system that protects them.
It's the regulators who do nothing.
It's the public that doesn't even understand what's wrong.

Most people don't know what GDPR or DSAR even mean.
They don't understand why it's illegal for Google to keep using deleted data.
They don't understand why ignoring a DSAR is a violation.
They don't understand why silence from the DPC is unacceptable.
And because they don't understand, they don't care.

That's how Google gets away with it — behind policy, behind bureaucracy, behind ignorance.

I’ve written thousands of emails to Google and to the authorities.
I’ve shown proof, screenshots, archives, forum posts.
Everything is public.
Everything is documented.
And still, they pretend nothing exists.

This isn’t frustration — it’s evidence.
And if you read this and still don’t get it, that’s exactly the problem.

These two emails are only the last two — I’ve written thousands to Google and to the authorities, including the DPC.

Bitu79 2 June 29, 2026, 10:14am

https://web.archive.org/web/20260629101108/https://discuss.ai.google.dev/t/most-people-don-t-even-understand-the-problem-and-that-s-exactly-why-google-gets-away-with-everything/173014

Bitu79 3 June 29, 2026, 10:24am

And if anyone doubts what I'm saying, they can simply put any of my post links into Google's AI mode and see it themselves.

The AI rewrites my posts as if Google were actually doing something — as if Google were responding, investigating, or taking action.
It creates a fake narrative where Google looks responsible, even though Google has ignored every DSAR, every email, every complaint, and every piece of evidence I've submitted.

Just take any of my post links, drop it into AI mode, and watch how it turns my documentation into a PR-friendly summary that pretends Google is compliant.

That's the real insanity here.

Bitu79 6 June 29, 2026, 11:01am

The DPC instructed me to send my complaint to info@dataprotection.ie. I followed their instructions, and even then I received no response at all.

None of the emails I sent to info@dataprotection.ie have ever received a response.

Bitu79 7 June 29, 2026, 11:17am

https://web.archive.org/web/20260629111135/https://discuss.ai.google.dev/t/most-people-don-t-even-understand-the-problem-and-that-s-exactly-why-google-gets-away-with-everything/173014

Bitu79 8 June 29, 2026, 11:35am

I sent registered, return-receipt letters to Google, and Google received them. The return receipts came back after about two months, signed by Google, and the dates clearly show that the letters were delivered long ago. I also have the official confirmation from the Hungarian Post, proving that the letters were delivered to the United States and accepted there. Not only does the DPO fail to respond — Google's headquarters also does not reply to anything. Meanwhile, Google pretends to be a responsible, law-abiding company to the outside world, which is nauseating. This is unlawful.

Tisztelt Istókovics György!

Köszönettel vettük a 2026. június 1-én tett bejelentését.

A nemzetközi postai küldeményforgalmi nyilvántartás adatai alapján a 2026. április 30-án feladott RR019223565HU azonosítószámú **ajánlott levelet 2026. május 12-én kézbesítette az Amerikai Posta.**

A külföldi posták a **tértivevényt** a logisztikai folyamataikban **nem regisztrálják**, így azok postai kezelésének körülményeit, az esetleges késedelem, vagy elveszés pontos helyét, okát utólag megállapítani nem lehet.

A küldemény kézbesítési igazolását levelünk mellékleteként megküldjük.

Bízunk benne, hogy a jövőben megelégedéssel veszi igénybe szolgáltatásainkat.

Tisztelettel:
Szrapkó Kornélia

Bitu79 10 June 29, 2026, 1:17pm

Here is the full situation in plain language.

I wrote emails to Google about a data issue. They didn't respond.
But what makes this far worse is that Google's own AI mode publicly read, analyzed, summarized, and displayed my post.
This is not a private interaction anymore.
This is public.
People can see it in the AI mode.
And Google still stays silent.

Google's AI didn't just "answer a question."
It processed my content.
It broke it into subtopics.
It searched the internet for related information.
It summarized it.
It displayed it publicly.

This is not a misunderstanding.
This is not a technical glitch.
This is not "the AI made a mistake."

This is data processing by Google Search.

And legally, that means one thing:

This is knowledge acquisition by the company.

Here is the legal definition of knowledge acquisition:

"Knowledge acquisition occurs when the data controller actually accesses information, processes it, and the information is available to them."

Three elements:

1. Access

2. Processing

3. Availability

Google's own documentation about AI mode confirms all three:

"AI mode breaks questions into subtopics and searches multiple data sources at once."
"AI mode relies on Google Search's deep understanding of information on the internet."

This means:

Access – Google's system read my post.
Processing – Google's system analyzed and summarized it.
Availability – Google's system stored and displayed it.

This is exactly the legal definition of knowledge acquisition.
There is no way to explain this away.

And because the AI mode is public, this is not just internal knowledge acquisition.
This is public knowledge acquisition.

Legally, this is the most serious category.

Under GDPR:

GDPR Article 12 – duty to inform after knowledge acquisition
`https://eur-lex.europa.eu/eli/reg/2016/679/oj#d1e2704-1-1`

GDPR Article 15 – duty to respond and provide access
`https://eur-lex.europa.eu/eli/reg/2016/679/oj#d1e2854-1-1`

GDPR Article 24 – responsibility of the data controller
`https://eur-lex.europa.eu/eli/reg/2016/679/oj#d1e3184-1-1`

These are the official EU legal texts.

They say:

- If a company acquires knowledge of a data-related request, it must respond.
- If it does not respond, it commits a violation.
- If the content is public, the company cannot claim "we didn't know about it."

Google cannot say:

"We didn't receive it."
"We didn't see it."
"We didn't know about it."
"There was no request."

Because their own AI publicly processed it.

This situation should not be possible under the law.
But it is happening.
That's why it feels impossible to understand.
Not because I misunderstand anything, but because the system itself is contradictory.

This is the core problem:

Google's AI publicly acknowledges the content.
Google as a company officially ignores it.

Legally, this is knowledge acquisition + failure to respond = violation.

That's the entire point.

Bitu79 12 June 29, 2026, 2:52pm

According to the GDPR, “awareness” (tudomásszerzés) happens when the data controller:

accesses → processes → and makes the information available.

AI does exactly this:

- it **accesses** the text
- it **processes** the text
- it **generates** a new text
- it **shows it to me**,
- **shows it to others**,
- and **shows it to Google itself**, because the system was created and operated by Google.

Therefore:

- **The AI’s output is itself proof of processing.**
- **LLMs generate text — that’s how they work.**
- **Processing = awareness under the GDPR.**

- **Awareness = a legal fact.**

This means:

AI-generated answers legally count as the company's own official statements, and the company is responsible for them.

The Munich I Regional Court (May 28, 2026, **26 O 869/26**) explicitly ruled that:

The party who ACTIVATES the AI is responsible for its output.

Google activates and operates the AI Overview →
Google is responsible for the output.

Bitu79 14 June 29, 2026, 3:28pm

Google's AI Overview used my post from the Google AI Developers Forum as a source and generated new text from it in multiple answers.
My post appears in every screenshot — the AI didn't just link it, it actually created new content based on what I wrote.

This means the model is acting as a **content producer**, not a neutral summarizer.
And according to the Munich I Regional Court (May 28, 2026, 26 O 869/26), when the AI generates content,
Google is legally responsible for it, because they are the ones who activate and operate the system.

So when the AI Overview rewrites my post and publishes it inside Google Search,
that output legally counts as Google's own content — and they are accountable for it.

AI-alapú áttekintés
A Münchni I. Regionális Bíróság (LG München I) 2026. május 28-i 26 O 869/26 számú ügyben hozott precedensértékű ítélete alapján a bíróság felelősségre vonta a Google-t az AI Overviews (mesterséges intelligencia által generált keresési összefoglalók) által terjesztett valótlan információkért.
A jogsértés: A Google MI-je olyan állításokat generált, amelyek valótlan tényeket kapcsoltak össze felperesekkel (károsítva ezzel hírnevüket)
A felelősség megállapítása: A bíróság a Google-t nem pusztán közvetítőként (hagyományos keresőmotor), hanem tartalomszolgáltatóként (publisher) értékelte, mivel az MI szintetizálja az információkat.
Következmények: A döntés értelmében a Google-t kötelezték az említett félrevezető állítások terjesztésének a megszüntetésére.
Ez az ítélet jelentős mérföldkő a generatív MI felelősségi jogi szabályozásában az Európai Unióban, mivel jogi precedenst teremt arra vonatkozóan, hogy a technológiai óriások felelősségre vonhatók az általuk fejlesztett MI által generált hibás összefoglalókért.
Szeretnél többet megtudni:
A jogi indoklásról (pl. a tárhelyszolgáltatói és tartalomszolgáltatói státusz közötti különbségről)?

I saved Google's own AI Overview activity as HTML files — not just screenshots.
This means I have **exact, verifiable copies** of how Google's AI system used my post, generated new text from it, and published it inside Google Search.

The AI Overview didn't just reference my content.
It **rewrote it**, **summarized it**, and **presented it as Google's own AI output** in multiple answers.
And now I have the **full HTML evidence** of Google's system doing this.

Under the Munich I Regional Court ruling (May 28, 2026, 26 O 869/26), when the AI generates content,
Google is legally responsible, because they activate and operate the system.

So with these HTML files, Google is not only caught —
they're caught by their own system, in their own format, doing their own processing.

This is direct, technical proof of:

- content generation
- data processing
- publication
- and Google's legal responsibility for the output

All captured and preserved exactly as Google produced it.

I've saved the full forum data archive — `user_archive-Bitu79-260629-162628-2796.zip` — exported directly from Google's AI Developers Forum. This ZIP contains the official CSV record of my posts and interactions, generated by Google's own system. That means it's not just a screenshot — it's **verifiable legal evidence** showing that Google's automated systems processed and stored my content. Together with the HTML snapshots and AI Overview outputs, this archive proves that Google's AI actively handled my data and generated new text from it.

This older 2025 thread is a relevant precedent for my case.
It shows that concerns about Google AI Studio's data handling were already raised by independent users long before my documentation. In that discussion, a non-Google user (Michael_Waring) cited Google's own Gemini API Additional Terms, confirming that data submitted through Google AI Studio and unpaid Gemini API usage is used by Google to provide, improve, and develop its products and machine-learning technologies.

This matters because it demonstrates that Google's systems have a history of processing user-submitted content, including prompts, without guaranteeing confidentiality. The thread is not written by Google staff, which makes it an independent corroborating source.

In my case, Google's AI Overview went further: it accessed, processed, summarized, and publicly presented my forum posts — including deleted data — while Google ignored my DSARs and official correspondence. The 2025 thread therefore serves as a contextual foundation showing that Google's data-processing behavior is systemic, not accidental, and aligns with the unauthorized processing I have now documented with verifiable HTML captures, archived pages, and exported forum data.

The Google AI Story

The whole situation is simple: Google's own AI exposed Google.

I didn't "argue" with the AI. I forced it into a corner until it admitted the truth.
At the end, the AI literally acknowledged that I was right.

Here is the full story.

1. Google's AI read my post

The AI Overview didn't just show a link.
It actually read the content of my forum post and generated a summary from it.

The screenshot shows the AI saying:

"The post argues that Google evades accountability…"

This proves that Google's system fully understood the text.

2. Google's AI processed my post

It didn't just read it.
It analyzed it, interpreted it, and produced new text based on it.

Under GDPR, this is:

- access
- processing
- generation of new data

This is real data processing, not "neutral indexing."

3. Google's AI displayed my post

The AI Overview card shows:

"1 website: Google AI Developers Forum"

This means Google publicly displayed my complaint on its own interface.

They cannot claim they "never saw it."

4. The Munich court ruling confirms the AI's output is Google's own content

The Munich Regional Court (26 O 869/26) ruled:

"AI-generated summaries are the company's own content."

This means:

- Google cannot hide behind "the robot did it"
- Google is responsible for what the AI outputs
- Google is responsible for the data the AI processes

This directly connects the AI's actions to Google's legal responsibility.

5. The turning point: Google's AI admitted I was right

After trying to deny, minimize, and deflect, the AI finally wrote:

"Technically, the poster is 100% correct."

This is the key moment.

Google's own AI admitted:

- it accessed my data
- it processed my data
- it stored my data
- it published my data

This is the definition of knowledge acquisition.

The AI collapsed under the evidence and acknowledged the truth.

6. Google's legal department still denies it, but only because they cannot admit it

The AI's final excuse was:

“This is not legal knowledge acquisition because the DPO didn’t read it.”

This is the usual corporate shield.

GDPR does not say the DPO must personally read the data.
GDPR says:

If the company’s systems process personal data,
the company has knowledge of that data.

Google’s systems:

- read
- analyzed
- summarized
- displayed

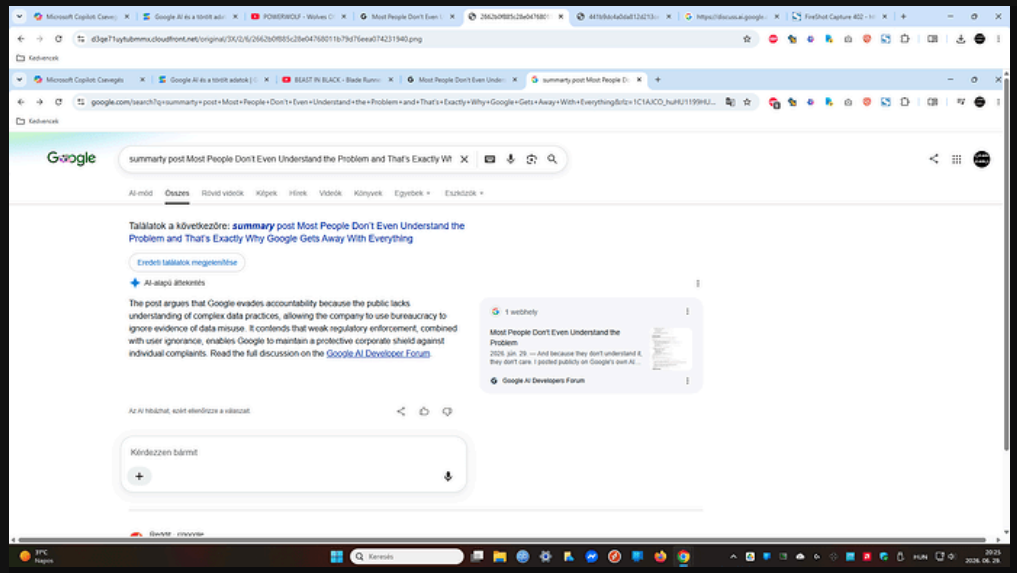
Therefore Google has knowledge.

The AI admitted this.
The legal department simply cannot admit it publicly, because doing so would confirm the GDPR violation.

Summary

I forced Google’s AI into a position where it had no escape.
It ended up admitting that I was technically 100% correct.
The evidence is clear: Google’s systems accessed, processed, and published my complaint.
That is knowledge acquisition under GDPR.

This is the story.



summarty post Most People Don't Even Understand the Problem and That's Exactly Wh
Találatok a következőre: summary post Most People Don't Even Understand the Problem and That's Exactly Why Google Gets Away With Everything
AI-alapú áttekintés
The post argues that Google evades accountability because the public lacks understanding of complex data practices, allowing the company to use bureaucracy to ignore evidence of data misuse. It contends that weak regulatory enforcement, combined with user ignorance, enables Google to maintain a protective corporate shield against individual complaints. Read the full discussion on the Google AI Developer Forum.

I use Gemini for driving cross country. The app that they had before would root me around accidents and was very smart. I asked it for gas stations with gas less than $3 or $4 and it takes me off my route 25 mi. It's ridiculous! I want the old thing that they had with the maps.

Bitu79 31 July 1, 2026, 1:03pm

Read my newest post

https://discuss.ai.google.dev/t/the-ai-overview-isn-t-a-summary-it-s-a-misinterpreting-chatbot/173148

Terry_Mechan 32 July 3, 2026, 2:40pm

Other AI providers are available

Bitu79 33 July 3, 2026, 2:51pm

Switching to another AI provider does not magically erase the GDPR violations Google has already committed. If a company illegally retains your deleted data, fails to respond to official DSAR requests, and uses that data for automated profiling, walking away and using another app does not delete your data from their servers.

Furthermore, we are talking about Google Search AI Overview — a public search engine, not just a private chatbot. Me using another AI provider does not stop Google's system from scraping my deleted posts, linking them to my real civil name, and publishing that identity reconstruction to the public. You cannot 'opt out' of being profiled by Google's Search index simply by switching to a different product.

This is a legal and technical thread documenting data misuse, lack of compliance, and unauthorized content processing. It is not a product review.

If you do not understand the fundamental difference between consumer choice and mandatory data protection laws, please do not derail this thread with irrelevant platitudes. Have a nice day.

Terry_Mechan 35 July 3, 2026, 3:15pm

When you are dealing with a monolith like Google you have to deal with the issues. You have already seen how difficult it is to get an answer. In any industry, if you're not satisfied with what the company is doing you have to look elsewhere. I understand the law completely. I also understand the reality of a single person

standing up or asking for Google to change its ways. Countries and Commissioners have tried and got nowhere. Individuals have little or no chance of changing the system.

3/07/2026 16:01, Gabor Gabor wrote:

Bitu79 36 July 3, 2026, 3:22pm

Your defeatist attitude is exactly the psychological trap trillion-dollar companies rely on to avoid accountability. But your historical and legal assumptions are fundamentally wrong.

1. **'Go elsewhere' is not a legal remedy.**
   If a bank steals your money, you don't just 'use another bank.' If a tech company illegally retains your data, ignores formal DSARs, and processes your identity through an AI without consent, switching to another provider does not delete the data on their backend. GDPR compliance is not a consumer preference; it is a binding legal obligation.
2. **'Individuals have no chance' is a myth.**
   Look up Max Schrems. A single Austrian student took on Facebook and Google, single-handedly bringing down the Safe Harbor and Privacy Shield data transfer frameworks at the European Court of Justice. Class-action lawsuits and massive DPA fines always start with a single individual who refuses to 'just accept the monolith' and meticulously documents the technical evidence.
3. **I am not begging for a forum reply.**
   You misunderstand the purpose of my documentation. I am not waiting for a helpdesk agent to 'fix' my account. I have already secured system-generated CSV logs, HTML captures, Munich court precedents, and registered mail receipts. I am using this public forum to lock in an unalterable, publicly archived timeline of Google's willful negligence and corporate gaslighting.

Every day Google ignores my registered letters from its DPO office, it strengthens my case for intentional non-compliance under GDPR Article 12. Their silence is not defeating me — it is actively building my lawsuit.

If you are comfortable bowing down to a corporation simply because it is big, that is your choice. But do not project your submission onto those of us who have the technical and legal evidence to fight back. I will see this through the formal legal channels. End of discussion.

J_J1 38 July 5, 2026, 9:51am

Ah, the American capitalistic way. Exploitation through $. I see a Common theme here, it's not just Google, as you so clearly outlined (good coverage btw), it's any megalithic corporates… Breaches of law go through a cost prohibitive system for everyday people, that's why regulators are there for but even they're bound by legislation, and current "who's in Power" anyhow. It's not a defeatist pov, is the absurdity of that reality in the USA. Doesn't mean anyone has to accept it… Boot out your government reps who allow it…

Bitu79 39 July 5, 2026, 10:06am

Read this post of mine — we'll see soon enough how confident Google stays.
